

IN THE CLAIMS:

1. (ORIGINAL) An electronic device comprising:  
a digital camera;  
a user input device;  
memory means storing computer program instructions; and  
a processor operable under the control of the computer program instructions to provide separately a database application and a camera control application, wherein the database application is arranged to enable a user to access personal data organised as a plurality of entries in a database, where each of the plurality of entries is associated with a different person and has one or more alphanumeric text fields and an image field and wherein the camera control application is arranged to enable the user to control the device using the user input device to capture an image via the digital camera and to present a user selectable option, on capturing an image, for using the captured image as an image field of an entry of the database.
2. (ORIGINAL) An electronic device as claimed in claim 1, wherein the camera control application is arranged to immediately present a plurality of user-selectable options on capturing an image including an option for using the captured image as an image field of an entry of the database.
3. (CURRENTLY AMENDED) An electronic device as claimed in claim 1 or 2, wherein the camera control application is arranged to transfer the captured image from storage in a first memory to permanent storage in the database.
4. (CURRENTLY AMENDED) An electronic device as claimed in any preceding claim 1, wherein the camera control application is arranged to control the creation of a new entry in the database.

5. (CURRENTLY AMENDED) An electronic device as claimed in ~~any preceding~~ claim 1, wherein the camera control application is arranged to control the amendment of an existing entry in the database.
6. (CURRENTLY AMENDED) An electronic device as claimed in ~~any preceding~~ claim 1, wherein the user input device enables a user to selectively use either the database application or the camera control application.
7. (CURRENTLY AMENDED) An electronic device as claimed in ~~any preceding~~ claim 1, wherein the user input device is the keypad of a mobile telephone.
8. (CURRENTLY AMENDED) An electronic device as claimed in ~~any preceding~~ claim 1, wherein the database application functions as at least a telephone book.
9. (CURRENTLY AMENDED) An electronic device as claimed in ~~any preceding~~ claim 1, wherein each one of the plurality of database entries has at least one alphanumeric text field for storing a telephone number.
10. (ORIGINAL) An electronic device as claimed in claim 9, operating as a telephone, further comprising a display, wherein the processor is responsive to an incoming call to display an image from the image field of a database entry that has an alphanumeric text field corresponding to the telephone number originating the incoming call.
11. (CURRENTLY AMENDED) An electronic device as claimed in ~~any preceding~~ claim 1, wherein an entry of the database can be selected by a user by scrolling the image fields of the database.
12. (ORIGINAL) An electronic device as claimed in claim 2, wherein the processor is operable under the control of computer program instructions to provide an image viewing application, wherein selection of a first one of the plurality of user selectable options, makes the captured image accessible, via the database application, as an image field of a database entry and wherein selection of a second one of the plurality of

user selectable options makes the captured image available via the image viewing application.

13. (CURRENTLY AMENDED) An electronic device as claimed in ~~any preceding~~ claim 1 further comprising a temporary memory for temporarily storing a captured image.

14. (ORIGINAL) An electronic device as claimed in claim 13, wherein the processor is operable under the control of computer program instructions to provide an image viewing application, and the camera control application is arranged to transfer the captured image from temporary storage in the temporary memory to permanent storage accessible by the viewing application.

15. (ORIGINAL) A method of modifying a database that organises personal data as a plurality of entries where each of the plurality of entries is associated with a different person and has one or more alphanumeric text fields and an image field, comprising: providing a first application that captures an image and enables a user to assign the captured image to an image field of a first database entry ; and providing a second application for accessing the first database entry to display the image.

16. (ORIGINAL) A method as claimed in claim 15, wherein the first application, on capturing an image, immediately enables a user to assign the captured image to an image field of a database entry.

17. (ORIGINAL) A method as claimed in claim 16, wherein the first application immediately present a plurality of alternative user-selectable options on capturing an image including an option for assigning the captured image to an image field of a database entry.

18. (ORIGINAL) An electronic device comprising:  
message reception means;  
a user input device;

memory means storing computer program instructions; and  
a processor operable under the control of the computer program instructions to  
provide separately a database application and a messaging application, wherein the  
database application is arranged to enable a user to access personal data organised as  
a plurality of entries in a database, where each of the plurality of entries is associated  
with a different person and has one or more alphanumeric text fields and an image field  
and wherein the messaging application is arranged to display a received message  
including an image and to present a user selectable option for using the image as an  
image field of an entry of the database.

48 19. (CURRENTLY AMENDED) A method of modifying a database that organises  
personal data as a plurality of entries where each of the plurality of entries is associated  
with a different person and has one or more alphanumeric text fields and an image field,  
comprising:

providing a first application that receives an image in an incoming message and  
enables a user to assign the received image to an image field of a first database entry ;

and

providing a second application for accessing the first database entry to display the  
image.
